

BLACKWOOD

Rubber Infused lumber

How It's Made -

Starting with Treated Southern Yellow Pine, each board has 1/4" milled out of the top side. Once the boards are milled, the rubber from reground tires is infused into the boards, 6mm thick. The rubber then sits just above flush with the surface of the lumber so that the rubber always makes the first contact with equipment.

Benefits of Blackwood -

SAFER.

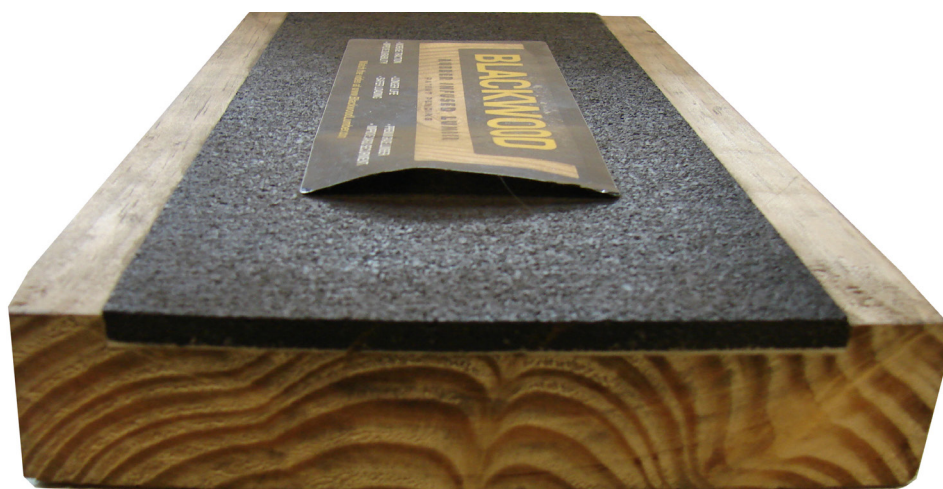

Blackwood provides superior traction on any surface it's applied to. From trailers to boat docks, Blackwood lumber prevents slipping and makes loading equipment easier and safer, even in wet conditions.

STRONGER.

Blackwood is made with the highest quality lumber, which is strengthened by the fusion process. The industrial grade rubber infused in Blackwood is the same rubber used at gun ranges to absorb bullets. Blackwood is made to withstand heavy impact that would crack and damage normal lumber.

LONGER.

The rubber infusion in Blackwood doesn't fade or crack like lumber. It also doesn't stain and can be easily cleaned with water. Blackwood lasts longer than normal lumber and will keep your trailer or other surface looking new and professional for years to come.

- Increase Traction
- Longer Life
- Improved Durability
- Safer Loading
- Improve Cargo Securement
